

Aquawood Dura-Finish L

5824

Transparent 1C varnish system for **exterior doors, for** use in industry and trade Optimised for use with Aquawood Dura Base L

PRODUCT DESCRIPTION

General

Water-based, matt, transparent 1C varnish system with very good resistance to weathering and UV radiation.

Stand-out features of this product include very good scratch resistance, very good protection against water, very good block resistance, good chemical resistance and very good permanent elasticity, combined with good hardness and short drying times.

Special properties and standards

Safety of toys; migration of certain elements (free of heavy metals).

DIN 53160-1 and DIN 53160-2
 Perspiration and saliva-proof properties

French ordinance DEVL1104875A

Marking of construction coating products for their emission of volatile pollutants: A+

Application area

Exterior doors, balcony doors, lift and slide elements and garage doors in outdoor and indoor areas.

PROCESSING

Processing instructions

- Please stir the product before use. However, prevent entry of air while stirring.
- The temperature of the product and object, and the room temperature must be at least + 15 °C.
- The optimal conditions for use are between 15 25 °C with a relative atmospheric humidity between 40 - 80 %.

1-1 IMC 5824 | 05/25 | replaces 1-0

- Too high dry film thicknesses from approx. 120 µm reduce the diffusion capacity and should thus be avoided.
- Sealants must be compatible with the coat and may only be applied once the paint has dried through. Sealing profiles with plasticizers tend to stick together in combination with paints. Please only use those types that have been tested.
- When changing from Aquawood Dura-Finish L (5824) to other waterbased paint systems, care must be taken to adequately clean the pipes and spray equipment, preferably with warm water.
- Finely structured surfaces can be achieved by adding Aquafix S (8110). At the same time, the high mechanical resistance is further increased. Quantity to be added up to a maximum of 4 %.
- Any change in the processing sequence, environmental conditions, nonobservance of instructions or the use of products not listed may have an unfavourable effect on the result. Deviations lead to film and adhesion problems as well as to impairments with regard to weathering and color stability.
- Please follow our ARL 305 Working guideline for coating dimensionally stable and limited dimensionally stable construction elements - Coating of front doors and garage doors.

Application technique

	Airless	Airless air-supported (Airmix®, Aircoat, etc.)
Spraying nozzle Ø (mm)	0,28 - 0,33	
Spray nozzle (Ø inch)	0,011 - 0,013	
Nozzle angle (°)	20 - 40	
Spraying pressure (bar)		80 - 100
Vaporizer Air (bar)	-	0,5 - 1,5
Spraying distance (cm)	25	
Diluent	Wasser	
Diluent amount added (%)	0 - 5	
Applied quantity per application (g/m²)	225 - 300	
Wet film (μm)	225 - 300	
Dry film complete coating system (μm)	80 - 120	

The shape and surface condition of the workpiece as well as the type of application influence the actual consumption. Accurate values for consumption must be obtained by applying trial coats in advance.

Drying times

(at 23 °C and 50 % rel. humidity)

Dust-dry (ISO 1517)	approx.1h
Tack-free	approx. 2 hour(s)
Stackable with PE fine foam spacers at room temperature	approx. 5 hour(s)
Stackable with PE fine foam spacers after forced drying 20 minutes Evaporation/dripping zone 90 minutes drying stage (35 - 40 °C) 20 minutes cooling stage	approx. 130 minutes

The figures given above are reference values. The drying time depends on the type of substrate, coat thickness, temperature, air exchange and relative atmospheric humidity.

Lower temperatures and/or high level of atmospheric humidity can increase the drying time.

Avoid direct sunlight!

Cleaning the working equipment

With water immediately after use.

To remove dried paint residues we recommend using Aqua-Cleaner (8029) (diluted 1:1 with water).

	SUBSTRATE	
Type of substrate	Wood in accordance with the guidelines for window construction.	
Substrate property	The substrate must be dry, clean, capable of holding the paint, free from separating substances such as grease, wax, silicone, resin etc. and free from wood dust, as well as tested for suitability for coating.	
Wood moisture	13 % ± 2 %	
	COATING SYSTEM	
Impregnation	1 x Aquawood Primo (5453)	
	Intermediate drying time: approx. 4 hours	
	Use wood preservatives safely. Always read the label and observe the respective technical data sheets of the products before use.	
	Please follow our ARL 056 - Working guideline for the use of wood preservatives.	
Intermediate coat	Softwoods:	
	1 x Aquawood Dura-Base L (5820)	
	Hardwoods and Larch:	
	2 x Aquawood Dura-Base L (5820)	
	Intermediate drying: approx. 2 hour(s)	
Intermediate sanding	Slight smooth sanding: Grit size 220 – 280	
	Remove sanding dust.	
Finishing coat	1 x Aquawood Dura-Finish L (5824)	

	MAINTENANCE
Care	The durability depends on several factors: these include particularly the type of weathering, constructive protection, mechanical stress and the choice of colour applied. To obtain long durability, regular inspection, maintenance and, if necessary, repair measures are necessary. Annual cleaning with Top-Cleaner (7208) and maintenance with Top-Care (7227) in the package with Windoor Care-Set (7229). Touching up minor flaws with the original material.
Maintenance	Please follow our ARL 304 - Working guideline for coating dimensionally stable and limited dimensionally stable construction elements - Maintenance and repair.
	ORDERING INFORMATION
Size of trading unit	5 kg, 20 kg
Colour shades / Glosslevels	Colour shades can be obtained using the ADLER colour mixing system ADLERMix.
MADLER MIX	Base paint(s): Aquawood Dura-Finish L Basis W40 (5824000040)
	The final colour is basically obtained from the inherent colour of the wood, the applied quantity, the colour of the impregnation and the colour of the finishing coat.
	In order to ensure uniformity of the colour shade, use only material with the same batch number on a given surface.
	It is recommended to prepare a trial colour sample on the original substrate using the coating system selected in order to assess the final colour shade.
	In order to lay particular emphasis on the wood structure, the colour shade of Aquawood Primo (5453) selected should be darker than the one of Aquawood Dura-Finish L (5824).
	Please observe our ARL 800- Working guideline for working (including care and maintenance) with ADLER Mix, PUR Mix and Color4You dosing machines.
Supplementary products	Aqua-Cleaner 8029 (8029) Aquafix S (8110) Aquawood Dura-Base L (5820) Aquawood Primo (5453) Top-Care (7227) Top-Cleaner (7208) Windoor Care-Set (7229)
	Please refer to the corresponding technical data sheets of the products.
	FURTHER DETAILS
Durability / storage	Min. 1 year(s) in the original sealed containers.
	Make sure the product is protected against moisture, direct sunlight, frost and high temperatures (above 30 °C).
	Close opened containers well and use up the content as soon as possible.
Technical specifications	VOC content of the ready-to-use mixture: Limit value according to Directive 2004/42/EC for Aquawood Dura-Finish L (Cat A/d): 130 g/l. Aquawood Dura-Finish L contains a maximum of 60 g/l VOC.
Giscode	BSW20

DGNB (German Sustainable Building Council)

Quality level 4 (with factory coating)

Safety information

The product is only suitable for the industrial and professional use.

When sanding, use at least a P2 dust filter as personal safety equipment to protect against abrasive and wood dust. In case of hardwood (especially for Beech, Oak) a dust filter P3 is recommended.

The inhalation of paint aerosols during spray application must generally be avoided. This is ensured by the proper use of a respirator (combination filter A2/P2).

Further information on the subject of safety during transport, storage and handling as well as disposal can be found in the relevant safety data sheet. The current version can be accessed on the Internet at **www.adler-lacke.com**.
